

DEVELOPER EDITION

Freedom, Flexibility and Extensibility

Customers who value extensibility and customization beyond the scope of IgniteTech's standard release path leverage IgniteTech's Developer Edition to strike their own path forward at whatever pace and in whatever direction best aligns to their unique business needs.

SOURCE CODE-UNLOCKED

The Developer Edition is a source code-unlocked version to which customers can subscribe with rights to create and run derivative works.

The Developer Edition is licensed on an as-is basis. Developer Editions are available within the scope of a customer's existing license (e.g. number of users) or with expanded usage rights tailored to a customer's specific needs for broader usage of derivative works.

With the Developer Edition, you get access to the entire source code of the product. Instructions are provided for how to build/compile and deploy, as well as documentation on detailed engineering specifications of the architecture and design decisions taken to build the product.
