### **Workflow Automation Design & Updates**

Our team will recommend, design and implement automated workflows that remove manual entry, improve data accuracy and shorten critical cycle times. Several examples that improve cash conversion and reduce manual employee time include:

- Accounts Payable (Vendor invoice processing)
- Accounts Receivable (Invoice creation, approval & collections)
- Journal Review & Approval

### **Optimize & Update Form Design**

Our team of experts will review and update your forms to reduce data entry errors and average completion time. Combined with the Workflow Automation service, we'll optimize forms to automatically kick off automations when appropriate. Our team will:

- Enforce mandatory fields and implement data validation.
- Combine all important data fields of your business workflow into just one tab and initiate workflows from form submission where applicable.
- Eliminate unnecessary fields with autofill.

### **Managed Upgrade**

It's important to keep Computron updated to avoid security risks caused by out-of-maintenance software (such as operating systems, databases or browsers). Our team will upgrade your Computron instance to the latest version to ensure platform currency and activate maintenance and feature updates. This does not include customizations.
