SenSage AP

DEPLOYMENT
On-Premise

SUMMARY
SenSage AP is deployed within this telecommunication giant's infrastructure in multiple locations to help them collect logs from a magnitude of various systems operating on Linux Servers as well as Windows. This data is critical to conform to necessary compliance.

WHY SENSAGE AP
The customer had several compliance initiatives and internal requirements, including the need to combine PCI, SOX and GLBA compliance efforts; identify pattern anomalies for events, machines and timeframes; and track user activity, privilege use and sensitive data use. SenSage AP was able to meet these requirements and allow for further scalability developing their own billing and invoicing solution.

CUSTOMER BENEFIT
The customer was able to capture events, machines, time and date and severity to analyze and identify anomalies.

CUSTOMER OUTCOME
With SenSage AP, this telecommunications company is able to self-audit to identify what reports have been reviewed and which investigations were run, helping to comply with internal audit and strict corporate policy requirements.

SOLUTION BENEFITS
- Collect more data from ready-to-use, customizable log collectors and adapters
- Retain data over years or even decades thanks to a great compression ratio
- Enable better decision making with advanced data analysis, detailed forensics, customizable data flow models and ad hoc investigations
- Leverage open standards such as ANSI SQL for querying data to enable sophisticated correlations with full precision, even on very large data sets
- Manage users and reporting functionality with full-featured business intelligence module
