

INTELLIGENT INVENTORY MANAGEMENT TO BALANCE SUPPLY WITH DEMAND THROUGHOUT THE SUPPLY CHAIN

IgniteTech's Vision Inventory Management is a fully hosted, multi-level vendor managed inventory (VMI) and inventory management solution. It helps manufacturers, distributors and retailers maximize profitability by ensuring that the right inventory is in the right place, at the right time.

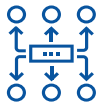

Today's business world is a fast moving and dynamic environment — one in which your teams expect to be able to access their business-critical data quickly and easily and meet the demands and changing world of your supply chain.

Range and category management doesn't have to be a monthly or quarterly process, nor involve large teams of people manipulating raw data and providing static outputs that are out-of-date as soon as they're completed. An effective range and category management process requires daily management. You need a tool with the power to make recommendations and capture opportunities as they occur.

The solution should also allow different methodologies to be deployed at different stages of an items life cycle so that you can consistently manage items from initial placement through to end of life.

IgniteTech's Vision Inventory Management delivers the flexibility to review and change plans with ease, while being linked into your entire business to ensure the most efficient speed to market. Whether managed by your current team or set up using our team of category experts, Vision will integrate into your current organization with ease and deliver tangible results with limited effort and reduced cost.

- **Increase Sales**
Improved product availability increases in-store sales and opportunities
- **Increase Stock Turn**
Increased sales and fewer overstocks provide an increased stock turn
- **Reduce Returns**
Reduce overstocks and increase sales by avoiding costly retail returns to the warehouse
- **Reduce Overall Inventory Position**
Increased sales, reduced overstocks and reduced returns lead to a reduction in overall inventory position

PLAN

Use all available data to effectively plan each product down to the most micro level of each individual point of sale.

IMPLEMENT

Quickly take plans and turn them into actionable planograms with process automation to maximize impact, reduce effort and minimize risk.

MANAGE

Manage your plans in real time to identify and maximize every opportunity on every item at each stage.

REVIEW

The power of advanced reporting and analysis at your fingertips to provide focused effort and maximum return.

ACTION

Transform reviews and analysis into action to effectively manage the entire product life cycle and to help capture every opportunity and limit risk.
